

# CARE AND MAINTENANCE GUIDE

V1.0 May 2021

## INTRODUCTION

Follow this care and maintenance advice to ensure the ongoing appearance and performance of FenceTank™.

## INSPECTIONS

Check fixings annually to ensure the FenceTank™ is securely fastened.

## CLEANING

Only simple, annual cleaning is required to maintain the FenceTank™ exterior. Use a soft-bristled brush, water or water with a mild detergent to wash the plastic.

Using other chemicals, cleaning products or stiff-bristled brushes could damage the tank's appearance and performance.

Where used to store non-potable water, the interior of the tank does not require any maintenance since the use of leaf guards and other devices will remove vegetation before entering the tank. It is probable that small amounts of soil or similar will enter the tanks, but the amounts will not impact on the storage or capacity of the FenceTank™.

Where used as part of a potable water supply system, ensure all necessary filters are installed and used in accordance with the supplier's requirements.

## EMPTYING THE TANKS

If the tanks need to be emptied for any reason consider the impact of any discharge to ensure that no damage results to your property or to your neighbours' property. Where possible empty the tanks over time making use of the contents to water gardens, clean cars or for other non-potable water uses.
